## **PROJECT OBJECTIVE**

**PROJECT NAME:**Real-Time River Water Quality Monitoring and Control System

**TEAM ID: PNT2022TMID36352** 

-The major goal is to create a system that uses wireless sensor networks to continuously monitor river water quality at remote locations with low power consumption, low cost and high detection accuracy.

- -pH, conductivity, turbidity level and other parameters are measured in order to enhance water quality.
- -The remote sensing technology is the cornerstone of IoT-based water quality monitoring.

- -This implements the approach by using the pH sensor, turbidity sensor to obtain analog readings for water contaminates.
- In addition, for the specific application, we can add extra sensor elements.
